

Thanks for joining the first PIP review meeting on March 8<sup>th</sup> with me and Prasun  
Here are the point we have discussed during the review meeting .

**Accountability Demonstrates personal responsibility for ensuring the completion of work assignments as prescribed.**

1. [Bug 1027322](#):OGS Professional who owns a bundle package NOT allowed to re-take the exam again
  - You have been working on this since December 28<sup>th</sup> ,2016 (1.23 iteration 6 ) and it's been more than 2.5 months but it is not yet completed .
  - On Feb 28<sup>th</sup> you said that you are done with development and will give the QA build by March 1<sup>st</sup>
  - On March 15<sup>th</sup> , you have asked Praveen to work on this ..
2. Bug 842341:Search Result displays out of range Date result on MyCPE advance search page for Webinars.
  - This defect was closed in iteration 1.23 iteration 3.
  - However at the end of 1.23 regression testing ,it was found that not working in qa1b and qa2.
  - With further investigation , It was identified that the code was commented by you but not communicated

**Communication presents ideas and information verbally and in writing in a clear, concise manner.**

- Research on Player Side – Missed on the original topic of research .
- On 3/7 sent an email saying you will be working from on that Day and next day applied for leave . This is clear communication gap , instead you could have sent an email on the same day that you can't work from home as you company provide phone with you .

**Overall , we feel that you have not met the expectation set by the management and still there an area for an improvement .**
